

Victoria Rural Portfolio

Background

EverGrace has recently consolidated a portfolio of rural properties across Victoria and is actively working toward the development of a large-scale, future-focused agricultural enterprise.

The company is supported by a strong and diverse investor base, bringing together both local and international capital. Our broader team includes accomplished professionals with experience across multiple industries, giving us a well-rounded commercial perspective and the capability to identify and execute long-term opportunities.

Company Vision

Our vision is to build a modern rural platform that unlocks the long-term value of agricultural land through improved infrastructure, smarter operations, and the adoption of advanced technology. We aim to move beyond traditional farming models and create a more productive, resilient, and scalable agricultural business for the future.

Project Introduction

The portfolio comprises a strategic collection of rural properties across Victoria with a diversified mix of dryland cropping, grazing, and mixed-farming operations. Several assets are already benefiting from active management improvements, providing a strong foundation for broader portfolio enhancement and long-term development.

Key Objectives

Our primary objective is to further develop rural agricultural resources by:

- improving existing farm infrastructure and operational capacity;
- introducing high-technology and modern supporting systems;
- increasing productivity and land-use efficiency;
- creating a more sustainable and scalable farming platform; and
- addressing the limitations of conventional agricultural models.

A critical first step in this process is water security. Before any significant expansion or intensification can be achieved, reliable access to water and fit-for-purpose water infrastructure must be resolved.

On a preliminary view, the portfolio appears to offer meaningful potential due to its scale, geographic spread, and mix of productive farming uses.

Victoria Portfolio summary

Property	Location	Approx. area	Current use / notes
Yarlok Estate	Fiskville	5,000 ha	Highly productive mixed-farming enterprise comprising dryland cropping and grazing. Benefits from a sub-soil manuring program that has materially improved production. 1500ha cropping and 2000 plus sheep, and 300 wagyu cattle.
