LENDER'S CUSTOMER DISCLAIMER

1. Herron Todd White (HTW) does not authorise the disclosure of this Valuation Report by National Australia Bank Limited ABN 12 004 044 937 and its wholly owned subsidiaries (the Lender) to any unauthorised third party other than to their customer, borrower or guarantor (the Lender's Customer) who:
 - a. directly paid for or reimbursed the lender specifically for this Valuation Report; and
 - b. has acknowledged and agreed in writing, prior to receiving a copy of this Valuation Report, that HTW and the valuer has no liability to the Lender's Customer howsoever arising, including as a result of negligence.

Any use by the Lender's Customer is subject to the following warnings and terms of use.

2. The Lender instructed HTW to undertake a valuation of the subject property and prepare a Valuation Report for the Lender to rely upon when assessing the subject property's suitability for mortgage security purposes.
3. HTW prepared the Valuation Report in accordance with the Lender's instructions (Instructions). When preparing the Valuation Report and providing it to the Lender, HTW acted solely and exclusively for the Lender and owed no duty to advise the Lender's Customer or to consider their circumstances or position.
4. HTW is aware that the Lender may be subject to the Banking Code of Practice (Code) and is disclosing the Valuation Report to its customer to meet its obligations under the Code. Where the Valuation Report is disclosed to the Lender's Customer under the Code, or any other disclosure of this Valuation Report, a copy of the Instructions should also have been provided to the Lender's Customer. The Lender's Customer must contact the Lender if they have not been provided with a copy of the Instructions. The Valuation Report should be read in conjunction with the Instructions.
5. HTW has not assumed any duty to advise the Lender's Customer or to consider the Lender's Customer's circumstances or position by being aware that the Lender must meet its obligations under the Code and provide the Lender's Customer with a copy of the Valuation Report.
6. HTW has no liability to the Lender's Customer howsoever arising at law, including as a result of negligence. HTW did not prepare the Valuation Report for the Lender's Customer and therefore makes no representations nor assumes responsibility at all to the Lender's Customer.
7. The Lender's Customer should not rely in any way on the Valuation Report as its sole purpose is for use by the Lender in assessing the subject property for mortgage security purposes in the context of the Lender's Customer's loan application or extension. Specifically, the Lender's Customer should not rely upon the Valuation Report for the purpose of:
 - a. deciding whether or not to enter into a transaction or alter their financial position; or
 - b. seeking finance from a third party, and should seek their own advice and valuation in such circumstances.
8. The estimated insurance value, if included in the Valuation Report is an estimate of the cost to replace the property new and is based on construction costs at the date of valuation. The insurance value includes some, but not all, ancillary costs that may be encountered when rebuilding the property as detailed in the Valuation Report. The insurance value should not be relied on as a full and accurate estimation of the insurance value for the purposes of making a decision as to the level of insurance coverage that the Lender's Customer should maintain.
9. The contents of the Valuation Report are confidential and HTW does not authorise the disclosure of the Valuation Report by the Lender's Customer to any third party.
10. The Lender's Customer should take note of the date of valuation of the subject property and be aware that the Valuation Report is current at the date of valuation only. The market value of the property may change significantly over a short period of time.
11. The Lender's Customer should direct any questions relating to the Valuation Report to the Lender. HTW is unable to speak to the Lender's Customer directly due to privacy and confidentiality obligations owed to the Lender.

EXECUTIVE SUMMARY - MORTGAGE FINANCE VALUATION

INSTRUCTIONS

Property Address	"LDR2" 89 Missingham Road, Dunoon, NSW 2480.
Instructing Party	Paula Hilliard, National Australia Bank Limited.
Prepared For	National Australia Bank Limited ABN 12 004 044 937 and its wholly owned subsidiaries.
Date of Inspection	26 August 2019.
Date of Valuation	26 August 2019.
Borrower / Client Reference / Applicant	Discovery Macadamia Pty Ltd ACN 609 762 594 ATF Discovery Macadamia Unit Trust / ValEx ID: 12202846.
Basis of Assessment	The interest being valued is the market value of the: • unencumbered fee simple with vacant possession 'in use' including water licences and macadamia nut trees but excluding crop, mobile plant and equipment and net of GST. • unencumbered fee simple with vacant possession 'alternate use' including water licences but excluding macadamia nut trees, crop, mobile plant and equipment and net of GST. Our valuation has been prepared for first mortgage security purposes for use by National Australia Bank Limited ABN 12 004 044 937 and its wholly owned subsidiaries. It has been prepared in accordance with the current Australian Property Institute's Mortgage Valuation Practice Standards and National Australia Bank Limited ABN 12 004 044 937 and its wholly owned subsidiaries standard instructions.
Purpose of Valuation	First Mortgage Security Purposes Only. This valuation report is for the use of and may be relied upon only by the party/parties to whom it is addressed. No other parties are entitled to use or rely upon it and the valuer does not assume any liability or responsibility to any other party who does so rely upon the valuation without the express written authority of Herron Todd White (NAT Operations) Pty Ltd.
Definitions	Market Value The estimated amount for which an asset or liability should exchange on the valuation date between a willing buyer and a willing seller in an arm's length transaction, after proper marketing, where the parties had each acted knowledgeably, prudently and without compulsion. Highest and Best Use The use of an asset that maximises its potential and that is physically possible, legally permissible and financially feasible. In Use An "in use" valuation includes all necessary fixed plant and equipment considered necessary to operate the property on its declared highest and best use basis. It is emphasised that an "in use" valuation is not assessed on a going concern basis (i.e. no business component or moveable plant is included). The approach simply reflects the fact that some farms rely on (and are normally sold with) certain items of fixed plant which enhance the property value, but are not legally regarded as part of the freehold.

Alternate Use

The alternate use value is one in the same as market value, however ignoring the existing use and adopting the highest and best alternate use of the property under the existing zoning and development constraints.

TITLE AND STATUTORY DETAILS

Real Property Description	Lot	Plan	Tenure	Title Ref.	Registered Owner	Area (ha)
	2	550768	Freehold	2/550768	Discovery Macadamia Pty Ltd	56.43
	103	755703	Freehold	103/755703	Discovery Macadamia Pty Ltd	80.43
	8	755703	Freehold	8/755703	Discovery Macadamia Pty Ltd	0.81
	Total					137.67

Encumbrances

A title search dated 5 September 2019 has been carried out by Herron Todd White and is annexed to this report.

Second Schedule

Lot 2 DP550768

- 1 Land excludes minerals and is subject to reservations and conditions in favour of the Crown - see Crown Grant(s). A common encumbrance, we have not searched the Crown Grant(s) and assume nil adverse.
- 2 AK683983 Mortgage to National Australia Bank Limited. The valuation assumes all mortgages are repaid.

Lot 103 DP755703

- 1 Land excludes minerals and is subject to reservations and conditions in favour of the Crown - see Crown Grant(s). A typical encumbrance, we have not searched the Crown Grant(s) and assume not adverse.
- 2 3128146 Easement for transmission line affecting the part of the land shown so burdened designated (b) in DP267021.
AA430138 Easement now vested in Country Energy.
AI758453 Variation of easement 3128146 terms varied. Burdens the land, not searched but it appears that macadamia trees have been removed under power lines.
- 3 AK683983 Mortgage to National Australia Bank Limited. The valuation assumes all mortgages are repaid.

Lot 8 DP755703

- 1 V690778 Land excludes minerals. A common encumbrance.
- 2 AK683983 Mortgage to National Australia Bank Limited. The valuation assumes all mortgages are repaid.

The above noted easements and encumbrances have not been individually searched nor a legal opinion obtained regarding their precise impact on the land.

This valuation is subject to there being no other easements or encumbrances which may have an adverse effect on our valuation. Should any such easement or encumbrance become apparent, we reserve the right to review our valuation.

Water Rights

Licence Details	Unregulated River
Reference No	30AL300437 WAL 225
Registered Owner	Not searched
Registered Parcels	L 103 DP 755703, L 2 DP 550768
Water Authority	Richmond River Area Unregulated, Regulated and Alluvial
Water System Type	Unregulated river
Trading Zone	Coopers Creek Water Source. Lower Coopers Creek
Annual Limit (ML)	243
Service Points	Irrigation & conservation of water. Bywash dam
Other Details	125 mm centrifugal pump

No water title/licence search has been undertaken or sighted. In the event that a title/licence search reveals any information or discrepancy which may affect the value of the property, the valuer's opinion should be obtained before reliance is placed on the valuation.

The trading rules of this water source are as follows:-

“Trading rules for the Upper Coopers Creek and Lower Coopers Creek Management Zones:-

INTO water source

Not permitted

WITHIN water source

No trading permitted into the Restricted Trading Zone located in the Upper Zone.

No trading into the Upper Zone.

Trading permitted from the Upper Zone to the Lower Zone.

No trading from tributaries to the main trunk of Coopers Creek.

Conversion to High Flow Access Licence

Not permitted

Conversion to Aquifer Access Licence

Permitted, subject to assessment.”

Trades that are permitted appear to be into the Coraki and Wyrallah Water Sources. We understand that there are significant water allocations in the Coraki Water Source that are dormant.

Local Authority

Lismore City Council.

Zoning

The property is designated RU1 Primary Production Zone according to the Lismore Local Environmental Plan 2012 (LEP) that took effect on and from 22 February 2013.

A dwelling is a permitted use under this zoning. The minimum subdivision area is 20.00 ha. Only Lot 8 DP 755703 is less than 20 ha, a dwelling entitlement search at Council would be required to determine the dwelling entitlement status of this lot. On an alternate use basis (and potentially ‘in use’ as smaller macadamia farms) there would be the opportunity to apply for a 6 lot subdivision with a minimum lot size of 20ha.

Macadamia nut tree farming is permitted without consent as ‘Horticulture’ as ‘Intensive plant agriculture’ under the LEP. LEP mapping indicates the subject property is affected in total by the Drinking Water Catchment Map. Farming may become more ‘prescriptive’ in these locations. Refer Annexures for a Rous County Council brochure in relation to macadamia nut tree farming in water catchments.

It should be noted that we have not sighted any town planning approvals for the subject property. Our valuation is based on the assumption that all of the improvements have been fully approved by the Council.

A Local Authority search has not been carried out and it is assumed the property is free of requisitions.

VALUATION SUMMARY

Property Description “As Is”

The subject property is located about 25 km north of Lismore at Dunoon. It is a 137.67 ha property comprising 3 lots on mostly gently sloping land. The soil is mostly red basalt with some alluvial influences on the creek frontages, planted to a rain fed macadamia orchard of approximately 113.46 ha of macadamia nut trees, stated to be 20,346 trees (we have undertaken aerial mapping check measurements and these broadly confirm broadly the measure orchard area, although we calculate more trees – despite this we adopt the owner supplied data). The main varieties are 246, 344 and 660 on preferred spacings of 10 x 5 metres. These are ‘older’ varieties but remain popular, in particular 246 & 344. A large bywash dam and a 243 megalitre water licence are also features of the property.

The macadamia orchard is reasonably well presented. The orchard is one of the older orchards on the NSW North Coast being up to 39 years old. Production figures supplied for the 2016 - 2018 harvests indicate yields in the range of 158 – 187.5 tonnes per annum nut in shell (NIS) @ 10-% moisture. This represents an average of 1.61 tonnes per hectare. This is lower than the 3 tonnes per hectare yields that many growers aim for. Shading, old trees, and phytophthora may be contributing to these lower yields. There has been no kernel recovery data supplied, but a reasonable industry average kernel recovery is assumed for the purpose of this valuation. The crop we understand is almost all exported directly to China for processing.

Structural improvements includes a shed & tank.

The macadamia farm market is very strong on the NSW North Coast at present. There is limited recent evidence of sales in this value range.

All photographs in this report were taken by the Valuer on the date of inspection.

Last Sale

The last recorded sale was on 22 December 2015 for \$17,581,099. This amount is the gross value of the purchase of an amalgamation of four properties including the subject property in the Dunoon area. We have not been provided with a detailed apportionment of the purchase across the four properties, but some broad calculations and analysis indicate a value paid of about \$28,000/ha of mature orchard.

Values have increased since this sale. Of note in relation to increasing values of macadamia farms is Sale 8 in this report, 100A Lindendale Road, Lindendale which sold previously in May 2014 for \$1,450,000 (dwelling and pool constructed after the sale date). In 2014 this sale indicated an analysed value of \$37,121/ha of mature orchard. Five years later in May 2019 the analysis is \$72,597/ha of mature orchard (value increase \$35,476/ ha of mature orchard).

Market Value Subject to the assumptions and qualifications contained within the body of this report, the market value of the subject property (exclusive of GST) as at the date of valuation, has been assessed at:

"As Is"

Valuation Assessment

Market Value "As Is" **\$7,400,000**

(Seven Million Four Hundred Thousand Dollars)

"Alternate Use"

Valuation Assessment

Market Value "Alternate Use" **\$4,000,000**

(Four Million Dollars)

Our market value assessment is exclusive of any applicable GST.

Valuer

Paul O'Keeffe
AAPI / Certified Practising Valuer
API NUMBER: 68133 - STATE
REGISTRATION NUMBER QLD: 3006

Patrick Lally
AAPI / Certified Practising Valuer
Quality Assurance Manager
API NO: 68272

Important:

This valuation is for the use only of National Australia Bank Limited ABN 12 004 044 937 and its wholly owned subsidiaries to whom it is addressed and for no other purpose. No responsibility is extended to any third party who may use or rely on the whole or any part of the content of this valuation. No responsibility will be accepted for photocopied signatures.

The Counter Signatory, Patrick Lally, has reviewed the report and is satisfied that the opinion of value contained in the report has been reached based on reasonable grounds. For the avoidance of doubt, the Counter Signatory has not inspected the property and as such (under the API Professional Practice) cannot be an author of this report, and is confirming prima facie that the methodology used by the author of the report (the prime signatory) is sound.

This Valuation Report is prepared for the Lender named above and for first mortgage purposes only and is not to be used or relied upon by any other party for any other purpose. It is subject to the terms and conditions, disclaimers, qualifications and limitations contained in this Valuation Report, including the Third Party Disclaimer and Lender's Customer Disclaimer.

ASSUMPTIONS, CONDITIONS AND LIMITATIONS

Critical Assumptions

- This valuation report is provided subject to the assumptions, disclaimers, limitations and qualifications detailed within this report. Reliance on this report and extension of our liability is conditional upon the reader's acknowledgement and understanding of these statements.
- The property has been identified by cadastral mapping and the improvements appear to be within site boundaries. Please be advised that with regard to rural properties, it is often the case that encroachment of fencing occurs either way. It is however, not always practical to verify the status of boundaries due to the sheer size and scale of the properties and in most instances the impact on productivity, marketability or value is insignificant.
- The Valuer advises that the land classification as assessed in this report is derived from various forms of mapping, site inspection and verbal advice. The assessed land classification is at best an estimate and an accurate determination of land type/use can only be obtained by a site survey.
- All water entitlements referred to in this report are utilised on the subject property and form part of the overall assessment, notwithstanding that they are the personal property of the licensee and are not part of the real property.
- The water entitlements referred to in this report are unencumbered and will continue to be renewed on the same terms and conditions as the existing water entitlements.
- That production records supplied are accurate.
- That a reasonable industry average kernel recovery is being produced.
- That orchard details supplied are accurate.

Financier Recommendations

- The subject property is considered to offer suitable security for first mortgage purposes.
 - The Lender should satisfy itself, on legal advice, as to the adequacy of the security arrangements offered in respect of the water entitlements. In the event that such water licences are not available, have changed or do not form part of the security available, together with the real property, to be realised in a default situation, the value of the real property may be seriously and detrimentally affected.
 - In the event that the lender is not satisfied with the security arrangements offered in respect of the water entitlements, the Valuer should be requested to provide a valuation of the real property on a stand alone basis.
- The water entitlements utilised on the subject property are an integral part of its on going market value. Any change in the water entitlements or licences referred to in this report will result in a potentially significant increase or decrease in the market value of the combined property/water entitlements. If water entitlements referred to in this report change this valuation should be referred to the Valuer for review.

Lender Specific Requirements

- This valuation has been prepared in accordance with NAB's Valuation Instructions and can be relied upon by National Australia Bank Limited ABN 12 004 044 937 for mortgage security purposes.
- All investigations have been conducted independently and without influence from a third party in any way.
- The valuer/firm (in addition to the principal valuer) has no Potential Conflict of Interest or Pecuniary Interest (real or perceived) relating to the subject property.

RISK PROFILE

Asset

- Located in a rural farming and lifestyle area 25 km north of Lismore which provides a full range of services.
- Soils on the property are considered good quality red basalt soils, slightly acidic, but are suitable for macadamia nut trees, and improved with applications of lime.
- This orchard does have some shading & phytophthora problems that cause yield reductions in some macadamia orchards. Shading can be overcome by selective limb removal. Phytophthora requires specific management to restore tree health.
- Average industry yields anecdotally are spoken of as 3 tonnes per ha NIS @ 33% kernel recovery & 10% moisture. This farm over the last 3 years has not reached that level of production.
- The lender should, if concerned, obtain specific horticultural advice on the orchard in respect to productivity.
- The subject property is partly impacted by LEP Drinking Water Catchment mapping. Farming may become more 'prescriptive' in these locations.
- Alternate use – 20 ha minimum lot size indicates potential for 6 lots subject to Development Application.
- Larger than normal macadamia farm for this locality.
- Rain fed orchard. The large dam and water licence are attractive features, particularly for alternate uses.
- Dwelling entitlement search at Council would be required to determine the dwelling entitlement status of Lot 8 DP 755703.

Overall Risk: Medium-High

Market

- Very limited listings of macadamia farms for sale and strong demand at present
- Yields in the NSW macadamia industry had been below average from 2010 to 2013 due to adverse weather events i.e. storms and wind, overcast days, and possibly insect control and crop nutrition. The increase in the commodity price has resulted in improved management and production yields.
- Macadamia prices have firmed to \$5.40/kg NIS @ 10% moisture and 33% saleable kernel recovery which is a significant increase from the low of \$1.50/kg in 2007.
- The increase in the macadamia commodity price is partly attributed to strong Chinese demand. There are anecdotal reports of increased plantings in China, Vietnam and South Africa. It is beyond the scope of this report to determine the effect on the commodity price from increased world supply of macadamias. The China and Australia Free Trade Agreement (ChAFTA) has progressively reduced tariffs on macadamias since 2015. We understand as of 1 January 2019 the final 10% tariff has been eliminated.
- In 2019 the market for macadamia farms has firmed with good quality farms selling in a range up to and over \$100,000/ ha for mature orchard on the popular Alstonville plateau to the east. The Dunoon area typically has a lower value range per ha of mature orchard; the range is broadly \$40,000 - \$75,000/ha.

- Rural property values can fluctuate significantly depending on the relevant commodity price. This is a strong rural lifestyle locality, despite this if the commodity price drops and interest rates increase combined with a run of adverse seasonal conditions the market may become more volatile. The macadamia nut tree farm market has experienced notable increases in activity and price levels over recent times. We consider this strong market sentiment is being largely fuelled by the prevailing low interest rate environment and the strong commodity price. To this end, we caution that any uplift in interest rates and/or drop in the commodity price will likely reduce buyer demand (and potentially debt serviceability), which has historically corresponded to a reduction in value levels. We recommend this inherent market risk be considered in any lending decisions concerning the subject property.
- The subject property has been valued for NAB as part of a four property aggregation at Dunoon. These are larger than normal farms for the locality. If put to the market at the same time it is considered that corporate/institutional size purchasers would be the most likely buyer profile at this value level. A sale of a 644 ha macadamia orchard at Bundaberg demonstrates interest by this buyer profile in the macadamia industry.
- The rain fed orchard and relatively reliable NSW North Coast rainfall may be attractive in the context of the drought in other locations in Australia.

Overall Risk: Medium-High

Environmental

- Macadamia farming involves spraying of trees from time to time. Spraying of trees can cause concerns in the community.
- Segastus weevil, lace bug and other pests, fungus etc. can reduce yields and need to be managed effectively, typically with sprays.
- Bushfire. Parts of the land are identified on overlay maps.
- Adverse weather events & seasons can reduce yields.
- Water catchment management requirements will likely impact on macadamia farm's cultural practices such as fertiliser and spray programs in the future.
- Phytophthora root rot impedes production and requires management to restore production.

Overall Risk: Medium

PROPERTY DESCRIPTION

LOCATION

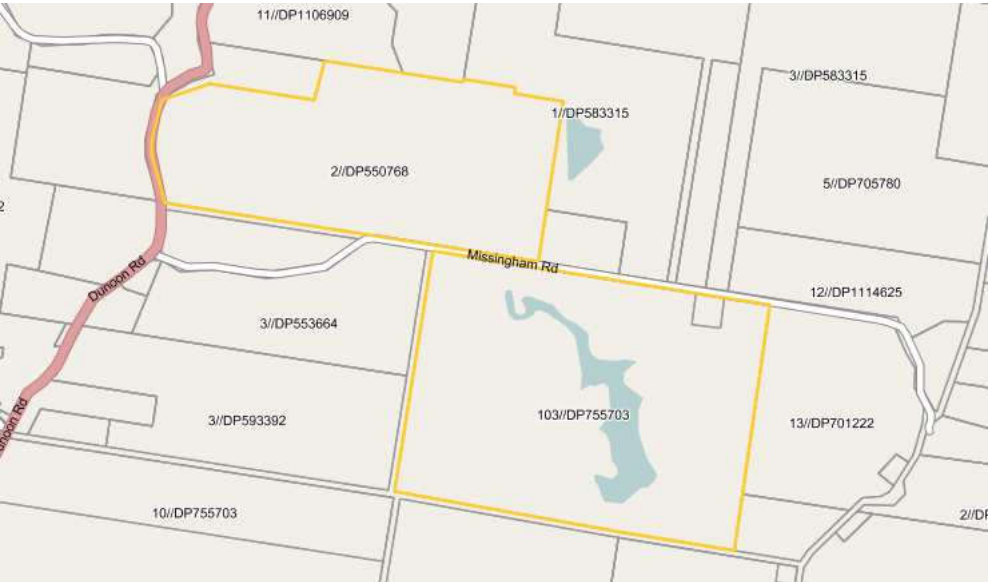

Location The subject property is located 25 km north of Lismore and 2 km north-east of the village of Dunoon.

We have identified the property from the cadastral map attached and our site inspection.

Location Map

Cadastral Map

Source: RP Data

Aerial Photograph

Source: Six Maps

Surrounding Land Use

This is a rural lifestyle, rural grazing, horticulture area with varying quality property surrounding.

THE LAND

Road System and Access Missingham Road is a gravel typical country road. Access to the property is easy and direct.

Services Dam water, creek water, tank water, single phase power and septic system are connected to the property. Mobile coverage is available.

Property Characteristics The property comprises 137.67 ha.

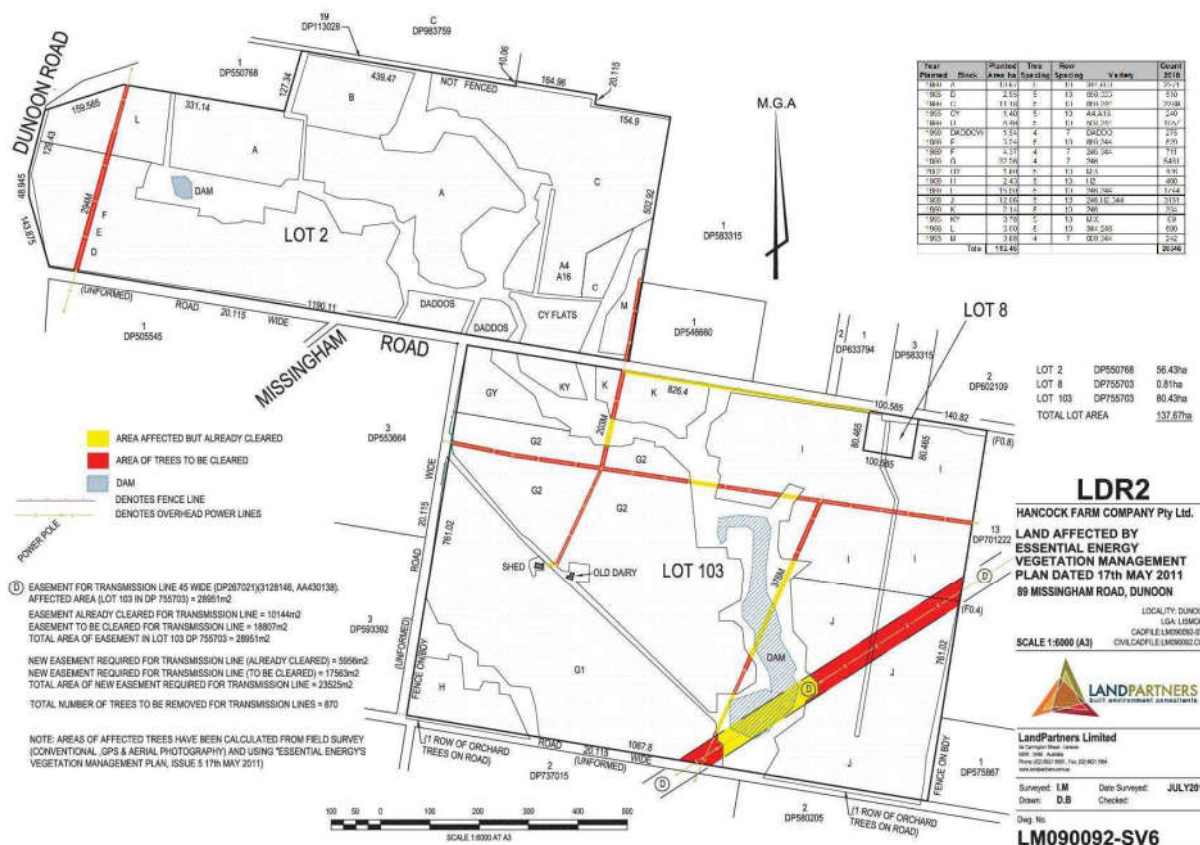

Topography	Bisected by Dans Creek, the land rises from below the 150 metre contour interval (Source: Dunoon Topographic Map NSW Department of Lands) to undulating slopes above the 170 metre contour interval. The slopes are mostly relatively gently sloping. The land is bisected by Missingham Road. Dans Creek has a large bywash dam. Power lines bisect the land.
Soil	Red basalt on the slopes, some alluvial influences on the creek frontages. Soil test results provided indicated pH in the range of 5.1 to 6.0 which is more acidic than the preferred 6.5. The owners are implementing a lime program to address this issue.
Development	Developed as a macadamia farm. The subject property macadamia trees are 17 – 39 years old. It is predominantly planted on 10 x 5 metre row spacings which are preferred by the industry. There are some phytophthora issues. The LDR2 Map supplied by the owner and included in this report has been adopted for orchard areas in this valuation. We have checked orchard areas with the EAC Red Square Mapping tool and the areas are broadly confirmed although we calculate more trees – despite this we adopt the owner supplied data. Refer Annexures for a Property Plan and Orchard table. The owner-supplied mature orchard area and tree numbers have been adopted.
Vegetation	Limited except some trees on the creek line.
Grasses and Pasture	Limited grass in the tree inter rows. There is evidence of root exposure. The owners are considering selective limb removal to promote light and minor landforming to promote more soil around the base of trees and develop drainage lines in the middle of the inter row to reduce erosion around tree roots.
Weeds	None significant noted.
Fertiliser History	Normal fertiliser programme. The owners undertake soil testing and apply nutrients as required.

Country Classification

A break up of the country development is as follows:

Classification	Development	Area (ha)	%
Red Basalt	Macadamia planted land and macadamia trees	113.46	82.41
Red Basalt	Balance area	24.21	17.59
Total		137.67	100.00

Irrigation

This is a rain fed orchard. There is a large dam that is used to source water for spraying. The surface area of this dam is measured to be broadly 30,000 m². The depth is unknown, but if say 3 metres is adopted, a rough volume is 30,000 m² x 3 x 40 % = 36,000 m³. This equates to 36 megalitres. We caution that this is only a very 'broad' estimate and should be confirmed by survey if relied on. The purpose of the calculation is a guide for possible alternate uses to the land that would require water.

Fencing

The property is fenced into two main paddocks, although parts of the boundary are not fenced. This is not considered significantly adverse in this location as macadamia orchards are the dominant land use.

Rainfall

The Bureau of Meteorology rainfall mapping indicates that the property is located within an area with an annual rainfall range of between about 933 mm and 2196 mm for the past 10 years. The mean 'average' rainfall is 1,429.3 mm.

The nearest Bureau of Meteorology rainfall monitoring station is located at Corndale, approximately 6 km from the subject property. The below graph illustrates the annual rainfall for this locality.

Station: Corndale (Coopers Creek)					Number: 58206		Opened: 1991		Now: Open					Details

The property is subject to dry conditions at present.

Highest and Best Use

We consider the current use as a horticulture property to be consistent with the highest and best use of the land at this time.

The yields on LDR2 the subject property are relatively low by industry standards at 1.61 tonnes per ha. Most growers aim for 3 tonnes per ha NIS @ 10 % moisture. There have been no kernel recovery data supplied, but a reasonable industry average kernel recovery is being produced is assumed for this valuation. We understand that the crop is almost all exported directly to China for processing. Kernel recovery is very important for the final per kg price paid. The valuation assumes yields provided are accurate.

Production	LMR			LDR1			LDR2			LRC		
	Tonnes NIS @ 10 % moisture	Tonnes/ ha	Kg/tree	Tonnes NIS @ 10 % moisture	Tonnes/ ha	Kg/tree	Tonnes NIS @ 10 % moisture	Tonnes/ ha	Kg/tree	Tonnes NIS @ 10 % moisture	Tonnes/ ha	Kg/tree

ENVIRONMENTAL STATEMENT

Site Issues	Any indication of previous noxious or potentially contaminating use?	No
	Subject to an environmental planning overlay that could constrain land use and development?	Yes, drinking water catchment, bushfire
	Adjoining land subject to an overlay that indicates adjoining land could be contaminated?	No
	Based on visual inspection to the extent that it is reasonably possible, are there adjoining sites that appear to or are known to have or have had noxious or potentially contaminating uses?	No
	Based on visual inspection and/or public record and to the extent that it is reasonably possible, is any known water (including ground and subsurface) contaminated in the surrounding land?	No
	Identified industrial processes onsite that involve the use of chemicals or hazardous materials?	No
	Identified past or present underground storage of fuels, chemicals or hazardous materials at the property?	No
	Included in the current register of contaminated sites?	No
	Do operations require environmental licensing, resource consent or equivalent?	No
	Site contamination evident?	No
	Environmental Register Searched?	Yes
The current use of the property for rural uses may involve the storage of quantities of fuel and/or farm chemicals and/or spraying of pesticides/herbicides. The existence of such products on site may require the property to be registered on the Environmental Management Register. Whilst our visual site inspection did not indicate any existing or historic use of the site (so far as it is reasonably identifiable) for any hazardous or potentially contaminating processes or for the storage (either above or below ground) of any hazardous chemical substance, we are not environmental experts. Therefore we are unable to certify and confirm that there is no contamination of the property either beneath or above the surface of the soil or elsewhere which might affect value. We note that the subject property is subject to an Environmental Planning Overlay Drinking Water Catchment (all of the property) and Bushfire (parts see mapping below). The overlay is not considered to have a material impact on the value of the subject property at present but as noted farming is expected to become more 'prescriptive' in these locations.		

Bushfire Map (Source NSW Planning Portal).

Whilst the Valuer did not note any obvious hazardous or toxic material on site, it should be noted that the valuation has been prepared without the benefit of a soil test or environmental studies of any sort. Accordingly, the valuation is subject to there being no surface or sub-surface soil problems including instability, toxic or hazardous wastes or building material hazards in or on the property that would adversely affect its existing or potential use or reduce its marketability.

Refer to annexures for Contaminated Land/Environmental Management Registers search dated 3 September 2019. The subject property is not indicated as contaminated on this search.

**Vegetation
Management
Status**

We have valued the subject property on the basis that all relevant government approvals have been attained in relation to the property in particular to the development of the cultivation areas.

IMPROVEMENTS

Other Improvements

Shed

Shed & tank

Building	Area	Unit	Floor	Frame	Cladding	Roof	Cond.
Machinery shed including electricity, water connected, toilet, sink, hand basin, septic tank, 22,500 litre concrete water tank and bunded fuel tank (fuel tank not included in valuation)	142	sqm	Concrete	Steel	Metal cladding	Metal	Good

Asbestos Materials

Could any buildings or improvements at the property predate 2004?

Yes

Is asbestos containing material known to be present?

No

Asbestos register/record available?

No

As the improvements were constructed prior to 1 January 2004, State legislation stipulates that an 'Asbestos Register' must be prepared and kept at the workplace.

We advise that the inspection of the subject property did not reveal any obvious visible asbestos containing materials to the valuer. The valuer is not qualified to conclusively determine the existence of asbestos and will not be held liable nor responsible for his/her failure to identify any asbestos containing materials and the impact which any asbestos material has on the property and its value. Should any asbestos concerns become apparent, this report must not be relied upon and should be returned to the valuer for further comment and review.

The presence of asbestos, change in community attitudes and the cost associated with dealing with its removal has the potential to reduce marketability and value of the property. The extent of this cannot be known.

Compliance of Building Materials

We have not obtained a compliance certificate in relation to the building materials. This valuation report has been prepared with the assumption that the building materials used, as well as the application and installation of those materials, are compliant with the building design as well as Australia's regulatory requirements and codes.

PROPERTY MARKET OVERVIEW

Property Market Overview

The 2019 harvest price is \$5.40/kg at 33% saleable kernel recovery at 10% Moisture Content. This is an increase from the 2016 - 2018 harvest season prices were broadly \$5.20/kg for premium and commercial grade plus bonuses that were paid by some processors in 2018, MPC being the most prominent. The 2015 pricing was \$4.40/kg, 2014 \$3.50/kg and 2013 pricing \$3.00/kg for similar specifications. Increased Chinese demand is believed to have contributed to this price increase. There has been increased interest in purchasing macadamia farms as a result and firming in macadamia land value levels. It should be noted that prices were as low as about \$1.50/kg NIS in 2007. Anecdotal reports indicate substantial plantings have been undertaken in China and South Africa. It is beyond the scope of this report to predict future pricing.

The lender should note that relatively low interest rates and strong commodity prices are underpinning values at present. Despite this there are very few macadamia farms listed for sale in the Ballina, Lismore & Byron Shires which are the traditional macadamia growing areas on the NSW North Coast. Internet searches reveal very few macadamia farms listed for sale on the NSW Far North Coast. Supply of properties is tight and demand appears to be strong for macadamia farms. During 2017 & 2018 good quality farms on the Alstonville plateau to the east were selling broadly up to \$85,000/ha of mature orchard. In 2019 this has firmed to over \$100,000/ha of mature orchard for better quality farms on the Alstonville plateau. The Dunoon location has indicated lower value levels for macadamia farms. This is because the superior lifestyle attributes and more coastal location of the Alstonville plateau, typically older macadamia farms at Dunoon and consequent typical closer row spacing's and lower productivity. Mature orchard values have been in the range of \$36,400 - \$75,480/ha in the Dunoon area.

Sales of macadamia farms above \$5,000,000 in value are limited locally. A dated sale was at 665 Newrybar Swamp Road, Newrybar. It sold for \$7,500,000 in June 2015 and comprised 124.53 ha with 94.62ha of macadamia orchard (22,924 trees). This sale indicated \$71,335/mature orchard ha. Production in 2014 was stated to be 242 tonnes NIS (about 2.5 tonnes/ha NIS). Sale 8 in this report, 100A Lindendale Road, Lindendale sold previously in May 2014 for \$1,450,000 (dwelling and pool constructed post this sale). In 2014 this sale indicated an analysed mature orchard value of \$37,121/ha. Five years later in May 2019 it is \$72,597/ha, an increase of \$35,476/ha.

A recent sale north of Bundaberg is a 1,018.53 ha property which has 644 ha of irrigated macadamia orchard. This orchard has old trees planted around 1986. Row spacings were 6 x 3.5 m but has been mostly converted to 12 x 3.5 m spacing's. Details of the sale are confidential but have been considered to determine this valuation.

Alternate Use

The North Coast has strong lifestyle attributes. Macadamia farms typically are located in sought after lifestyle locations. The Dunoon area is less sought after than the Alstonville plateau but despite this Dunoon is located in relative close proximity to Lismore which has a population of over 27,000 people (at 2016 Census).

The subject property is relatively large and would have some attractions for subdivision with minimum lot sizes of 20 ha (possibly 6 lots). Alternative agricultural pursuits would include bananas (Sale 10 in this report was purchased for bananas) or other horticultural pursuits such as avocados, blueberries etc. We note that we have no frost advice and this can be critical for these alternative crops. As the subject property macadamia trees have not been significantly adversely affected by frost as far as we are aware then frost is assumed to be not a significant constraint on an alternate use basis.

VALUATION CONSIDERATIONS

MARKET EVIDENCE

Water Market Comments

Water historically is seldom traded on the NSW North Coast, however in more recent times there has been more trading.

Properties sold that have a water licence typically do not always separately apportion the value in a 'negotiation' sense. The water licence is usually sold with the land as one negotiated lump sum. The NSW North Coast river & creek licences are almost all unregulated (no major storage dams) and pumping restrictions can occur when the water is most needed for the river licences. Trades between Water Sources are very restricted. It appears that the subject water licence can only be sold, subject to assessment, in the Bangalow Area, Wyrallah and Coraki Water Sources.

Sales of unregulated river licences on the NSW North Coast in recent times include:-

Cooper Creek - \$600/megalitre for 8 megalitres in 2018 and \$1,333.33/megalitre for .75/megalitre.

Alstonville - \$1,470/megalitre for 34 megalitres.

Nimbin area - \$2,000/megalitre for 77 megalitres for avocados and \$1,500/megalitre for 30 megalitres for pasture/cropping.

Clarence River - \$800 & \$1,250/megalitre for 110 & 205 megalitres respectively, both purchased by for high value permanent blueberry plantings. Some smaller trades in the Clarence River catchment of \$825/megalitre for 7 megalitres and \$800/megalitre for 14 megalitres in cropping/livestock locations.

There have been limited recent water licence sales in the Coopers Creek Water Source. For valuation purposes a value for a licence of this size is adopted at \$1,000/megalitre, but depending on marketing conditions and how marketed at sale a value of over \$1,000/megalitre may be possible, particularly if sold in smaller parts. Evidence of transfers above indicate that values over \$1,000/megalitre are possible.

Enquiries with selling agents indicate some demand currently locally for water licences following the very dry 2019 summer and the current dry conditions.

Sales Evidence

The most relevant sales identified in the area include:

'Dunoon' Sales

1. Address	Sale Date	Sale Price	Area (ha)	Improvements Value	Land Value/ha	
					Improved	Ex-Structures
548 Dorrroughby Rd, Dorrroughby NSW 2480	28/05/18	\$725,000	15.95	\$5,000	\$45,455	\$45,141
Land Description:	Good quality red basalt soils planted to 14.3 ha of macadamia nut trees (about 5,000 trees) on 7 x 4 m spacings. Producing about 40 tonnes of macadamias. Has a dwelling entitlement. High voltage powerlines over south-eastern corner.					
Improvements:	Shipping container and tank.					
Comments:	Purchase price

	Land value incl water ex. trees allow		26.7	\$35,000		<u>\$934,500</u>
	Trees		4,800	\$5.75		\$27,600
Comparison:	This sale is located nearby to the east. It was impacted negatively by low production, maintenance required and we understand an anxious sale.					

5. Address	Sale Date	Sale Price	Area (ha)	Improvements & plant Value	Land Value/ha																																																																																																			
					Improved	Ex-Structures																																																																																																		
206 Repentance Creek Rd, Rosebank NSW 2480	18/09/18	\$2,035,000	50.97	\$475,000	\$37,473	\$30,606																																																																																																		
Land Description:	The property comprises an above average size allotment in a well sought after rural lifestyle locality. The land is an undulating to moderately sloping rural holding which is developed into a macadamia plantation comprising approximately 4,064 macadamia trees (predominately mature) over a land area of approximately 16 ha. The balance land of approximately 35 ha is predominately-timbered gullies and steeper land except a small area of cleared grazing land and land immediately adjacent to the residence and work sheds. Macadamia trees are A4, A16, A38, 660, 246 (about 50 %), 741 & 816. Spacings 8 x 4, 7 x 7, & 10 x 4 m. Very well maintained farm. Average production last 4 years about 55 tonnes NIS @ 10 % moisture and about 34 % kernel recovery.																																																																																																							
Improvements:	The property includes an attractively renovated 3 bedroom log cabin home with 2 bathrooms double garage large outdoor living areas, inground pool, unapproved studio and two work sheds. The property is well improved and presented.

177 Humpty Back Rd, McLeans Ridges NSW 2480	24/01/19	\$3,950,000	53.39	\$445,000	\$67,428	\$65,649
Land Description:	Red basalt in 3 lots, each with a dwelling entitlement, planted to 36.5 ha of macadamia nut trees. There are about 7,700 trees that are mostly 27 years old. Spacings from 7.5 x 4 m to 9.5 x 5.5 m mostly. Varieties mostly 246, 344, 741 and some 849, 508, 660, A4 and A38. Production about up to 92 tonnes average per annum for the last 3 years which indicates to 2.5 tonnes per ha yield.. The orchard is a little run down, phytophthora, and had achieved superior production in 2014 and 2015. Water licence of 179 megalitres and a dam.					
Improvements:	Machinery shed, dehusking shed with 'workers accommodation', dehusking line and 4 silos, pump shed.

24 James St, Dunoon	10/10/2018	\$1,430,000	25.42	\$730,000	\$56,255	\$27,537
Land Description:	An irregular, battle-axe shaped parcel of land comprising predominantly easy to moderately undulating topography and steeper ridges with a building site which is naturally contoured and positioned on a well elevated plateau. The land is generally cleared apart from some areas of uncleared gully/sidling along the creek and pockets of rainforest towards the rear of the property. The land faces north, east, west with panoramic local rural & hinterland views and frontage to a creek which traverses the near centre of the property. Access to the property is easy and direct.					
Improvements:	A circa 1990's, single level, 5 bedroom, 3 bathroom, renovated, detached semi-modern dwelling with rendered brick walls, metal roof, verandahs/patios, 1 car attached carport and 1 car detached garage/workshop. Ancillary improvements include an a 500 metre, tree-lined asphalt driveway with a large white stone chip parking area near the house; boundary fencing of rural construction and an enclosed "house site" yard of mixed construction; steel vehicle gate, gravel/white stone chip & paved paths; extensive landscaping with retaining walls, established gardens and a variety of young fruit trees; metal clad machinery/store shed with concrete floor, metal frame, metal roof, roller doors; solar power system (10 kW), bore with pump and reticulated system; dam/s, rain water tanks, septic tank, built-in spa (with lid) to verandah with "pop-up" TV, steel stock yards. Includes a 5 mg/l water licence. The property has good external condition, good internal condition and good presentation.					
Comments:	Site value - \$700,000 – indicates \$32,425/ha for cleared land (10 ha @ \$20,000 balance land).					
Comparison:	This Sale indicates land value on an alternate use basis.

Sales Commentary

Evidence of recent sales of macadamia farms in the Dunoon locality indicates values in the range of \$36,034 - \$75,480/ha of mature orchard. Evidence of recent sales of macadamia farms in the Alstonville plateau area indicates values in the range of \$72,597 - \$90,168/ha of mature orchard (other sales held on file indicate up to \$105,667/ha).

Balance land area values are in the range of \$7,500 - \$30,000/ha.

A value of \$60,000/mature orchard ha and \$12,500/ha for balance area has been adopted for valuation purposes for the subject property.

The value of \$60,000/ha of mature orchard has been adopted as the subject property has industry preferred row spacing's of mostly 10 x 5 metres, fair to reasonable production levels and is mostly gently sloping. There are some farm issues to address but this value level is still well below the values paid at Alstonville where farms with similar production levels per ha are selling for over \$90,000/ ha of mature orchard for smaller farms. It is difficult to find a farm of this commercial size on the North Coast (other than the farms in the same ownership group). The recent sale of a large farm at Bundaberg supports value levels adopted.

The value of \$12,500/ha for balance land includes the bywash dam and is considered reasonable.

The value of the water licence has been adopted at \$1,000/megalitre.

Alternate Use Basis

Evidence of sales indicates cleared land values in the range of \$27,025 - \$32,425/ha. rate per ha has been adopted for the summation method. The macadamia farm sales values per ha 'arable' land value ex. trees deduced have been considered. There is an additional sale under contract considered at 2466 Dunoon Road, Rosebank. It has reportedly sold for \$1,595,000 for 40.59 ha. It has a small area of macadamias and a water licence. Analysed cleared to light timber arable land value would be approximately \$36,000/ha.

Values adopted are \$30,000/ha for arable land value and \$12,500/ha for balance land.

The value of the water licence has been adopted at \$1,000/megalitre.

VALUATION RATIONALE – AS IS

Valuation Rationale

In assessing the market value of the subject property we have had regard to the following valuation approaches:

- Summation
- Direct Comparison

These approaches use land area on a per hectare basis as the underlying basis on which to determine value.

Selling Period

Our assessment of market value herein assumes an effective marketing campaign of up to six months.

Summation Approach

This approach allows the Valuer to assess the individual components of the property. The various rates applied to both land and buildings are taken from our analysis of sales.

When utilising this methodology the property is valued on a land classification basis on a rate per hectare. The value of the building improvements and irrigation entitlements are added to the land value. The derived valuation amount for the land, buildings and irrigation entitlements is obtained from comparable sales evidence. The land values are provided on a cleared, fenced and watered basis.

Our workings on this basis are shown below.

Land Assessment

Country Classification	Development	Area (ha)	Rate (\$/ha)	Value
Red Basalt	Macadamia planted land and macadamia trees	113.46	60,000	\$6,807,600
Red Basalt	Balance area	24.21	12,500	\$302,625
Total Land Value		137.67	51,647	\$7,110,225
Added Value of Buildings				\$30,000
Total – Land and Buildings		137.67	51,865	\$7,140,225

Water Assessment

Type	Reference No	Volume (ML)	Rate (\$/ML)	Value
Unregulated River	30AL300437 WAL 225	243	1,000	\$243,000
Total Irrigation Water Value				\$243,000

Combined value of Land, Irrigation Entitlements and Buildings	\$7,383,225
Rounded	\$7,400,000

Direct Comparison Approach

This approach takes into account that there are individual characteristics of the property including soil type, topography, rainfall, location, production capabilities, level of building improvements, water entitlements and infrastructure development in relation to water, fencing and pasture development.

When applying this approach, the reader needs to appreciate that this methodology requires subjective judgment by the Valuer to determine value. In circumstances where there are multiple land classifications, varying irrigation entitlement types and significant building improvements, the reliability of this approach is reduced.

Our working calculations are detailed in the table below:

Direct Comparison Valuation Assessment			Value
Land and Buildings	137.67 ha @ \$50,000/ha		\$6,883,500
Water Entitlements			\$243,000
Total			\$7,126,500
Rounded			\$7,125,000

**Valuation
Conclusion**

In our valuation assessment of the property we have relied on several approaches and they provide a range of values. We have placed greater reliance on the summation approach as we consider it provides the most accurate assessment on how the market determines value.

Valuation Summary			Value
Summation Approach			\$7,400,000
Direct Comparison Approach			\$7,125,000
Adopted Value			\$7,400,000
Apportionment of tree value			
Mature macadamia orchard			\$6,807,600
Less			
Land value ex. trees allow	113.46	\$40,000	<u>\$4,538,400</u>
Trees	20,346	\$111.53	<u>\$2,269,200</u>

Contract of Sale

We are not aware of any current contract of sale over the property.

VALUATION RATIONALE – ALTERNATE USE

Valuation Rationale

In assessing the market value of the subject property we have had regard to the following valuation approaches:

- Summation
- Direct Comparison

These approaches use land area on a per hectare basis as the underlying basis on which to determine value.

Selling Period

Our assessment of market value herein assumes an effective marketing campaign of up to six months.

Summation Approach

This approach allows the Valuer to assess the individual components of the property. The various rates applied to both land and buildings are taken from our analysis of sales.

When utilising this methodology the property is valued on a land classification basis on a rate per hectare. The value of the building improvements and irrigation entitlements are added to the land value. The derived valuation amount for the land, buildings and irrigation entitlements is obtained from comparable sales evidence. The land values are provided on a cleared, fenced and watered basis.

Our workings on this basis are shown below.

Land Assessment

Country Classification	Development	Area (ha)	Rate (\$/ha)	Value
Red Basalt	Arable land	113.46	30,000	\$3,403,800
Red Basalt	Balance area	24.21	12,500	\$302,625
Total Land Value		137.67	26,923	\$3,705,425
Added Value of Buildings				\$30,000
Total – Land and Buildings		137.67	27,140	\$3,736,425

Water Assessment

Type	Reference No	Volume (ML)	Rate (\$/ML)	Value
Unregulated River	30AL300437 WAL 225	243	1,000	\$243,000
Total Irrigation Water Value				\$243,000

Combined value of Land, Irrigation Entitlements and Buildings	\$3,979,425
Rounded	\$4,000,000

Direct Comparison Approach

This approach takes into account that there are individual characteristics of the property including soil type, topography, rainfall, location, production capabilities, level of building improvements, water entitlements and infrastructure development in relation to water, fencing and pasture development.

When applying this approach, the reader needs to appreciate that this methodology requires subjective judgment by the Valuer to determine value. In circumstances where there are multiple land classifications, varying irrigation entitlement types and significant building improvements, the reliability of this approach is reduced.

Our working calculations are detailed in the table below:

Direct Comparison Valuation Assessment		Value
Land and Buildings	137.67 ha @ \$27,500/ha	\$3,785,925
Water Entitlements		\$194,400
Total		\$3,980,325
Rounded		\$3,980,000

Valuation Conclusion

In our valuation assessment of the property we have relied on several approaches and they provide a range of values. We have placed greater reliance on the summation approach as we consider it provides the most accurate assessment on how the market determines value.

Valuation Summary	Value
Summation Approach	\$4,000,000
Direct Comparison Approach	\$3,980,000
Adopted Value	\$4,000,000

INSURANCE ESTIMATE

Summary

In addition to providing a market value assessment for the subject property we have also been asked to provide our estimate of the likely cost of replacement of the buildings in the event they were destroyed.

Our calculations have been undertaken on the basis that the property was completely destroyed, the debris removed from the site and a new building of similar size and style erected in its place. Our assessment also reflects professional fees and an allowance for escalations over the insurance and reconstruction periods. On this basis the estimated costs of \$65,000 (exclusive of GST) would be required to replace the buildings. The Valuer is not a Quantity Surveyor or qualified in the field of building or construction and accordingly no professional liability is extended in this area. The above assessment is indicative only.

It should be noted that the above insurance assessment is exclusive of boundary and internal fencing, irrigation Infrastructure, including pump sheds, underground mains and above ground system.

A detailed assessment should be supplied by a Quantity Surveyor and/or Architect and any party relying on this report is recommended to seek appropriate advice of qualified parties.

A more detailed breakdown of individual improvement insurance values can be found at the end of the Annexures.

CERTIFICATIONS & QUALIFICATIONS

Accuracy of Information	We advise that any objective information, data or calculations set out in the Valuation Report will be accurate so far as is reasonably expected from a qualified and experienced valuer, reflecting due skill, care and diligence. However, we have not independently verified third party information, adopted it as our own, or accepted its reliability. If any of the information provided by others and referred to in the Valuation Report is incorrect, it may have an impact on the valuation. The valuation is provided on the proviso that the reliant party accepts this risk.
API Standards	This valuation has been prepared in accordance with the current Australian Property Institute's Valuation Practice Standards.
Boundary Fencing	It is not practical to identify all the boundaries of large area rural properties and it is often the case that encroachments of fences exist either way. In most instances this has limited to no effect on productivity, marketability or value. While there do not appear to be any major encroachments, valuers are not surveyors and no warranty can be given without the benefit of an identification survey.
Condition of Improvements	Whilst we have carried out a building inspection, we have not completed a detailed structural survey, verified the condition of the plant and machinery, tested any of the services or inspected unexposed or inaccessible portions of the building. We are therefore unable to state that these are free from defect, rot or infestation. We have viewed the general state of repair of the building and have assumed that the improvements are reasonably structurally sound considering their age.
Insurance Estimate	Our calculations have been undertaken on the basis that if the property were completely destroyed the debris would be removed from the site and a new building of similar size and style erected in its place. Any party relying on this advice must be aware that valuers are not quantity surveyors or qualified in the field of building or construction and accordingly we cannot extend any professional liability in this area and recommend properly qualified advice is sought. Should you require a precise estimate, this should be supplied by a quantity surveyor and/or architect.
Chemical Residue	The valuation assumes the property to have clear chemical residue status. If this is not the case and there is a cost to rectify, such may affect marketability and value and the valuation should be returned for reconsideration or reassessment.
Conflict of Interest	Neither the valuer, nor to the best of their knowledge, any member of this firm, has any conflict of interest, or direct, indirect or financial interest in relation to this property that is not disclosed herein.
Encroachments	We have physically identified the boundaries upon inspection and there do not appear to be any encroachments. However, we are not surveyors and no warranty can be given without the benefit of an identification survey.
Excluded Searches	The following searches have not been undertaken: Flood, Land Survey Plan and Contaminated Land Register. Our valuation assumes such searches would identify no issues that may affect the value and/or liquidity of the property. Should any person relying on the contents of this report be aware or become aware of an issue that may affect value and/or liquidity then the searches should be referred to the Valuer for comment.
First Mortgage	This valuation is provided on the basis that it may be used for assessing and providing first mortgage over the asset. We do not accept liability for losses arising from the assessment and/or provision of non-first mortgages.
Goods and Services Tax (GST)	We stress we are not experts in assessment of GST. We are not privy to the financial circumstances of the owner(s), any agreements executed (or to be executed) between the parties or the previous transactions relating to the property which may impact upon the status of the property for GST. We recommend any party relying upon this valuation seek independent advice in regard to any GST liabilities which may attach to the property.
Land not Affected	Unless identified within the body of this report, we assume, the land is not affected by unstable, hazardous, or toxic soil material; however, no professional expert advice has been sought in this regard. This valuation assumes that there are no problems, however, should any such issues arise; then this matter should be referred to the Valuer for further comment.
Limited Liability	Liability limited by a scheme approved under professional standards legislation.
Market Movement	This valuation is current as at the date of valuation only. The value assessed herein may change significantly and unexpectedly over a relatively short period (including as a result of general market movements or factors specific to the particular property). We do not accept liability for losses arising from such subsequent changes in value. Without limiting the generality of the above comment, we do not assume any responsibility or accept any liability where this valuation is relied upon after the expiration of 90 days from the date of the valuation, or such earlier date if you become aware of any factors that have any effect on the valuation. However, it should be recognised that the 90 day reliance period does not guarantee the value for that period; it always remains a valuation at the date of valuation only.
Native Title	The title searches for the subject property indicate that tenure to the subject property is freehold and, as such, it is likely that any native title claim over the subject property has been extinguished.
No Compliance Certificate	No Compliance Certificate/Certificate of Classification has been obtained. This valuation is subject to the building(s) complying in all material respects with any restrictive covenants affecting the site. Furthermore, it is assumed that the site improvements have been built, occupied and operated in full compliance with all requirements of law, including all zoning, land-use classifications, building, planning, fire and health by-laws (including asbestos and legionnaires disease), rules, regulations, orders and codes of all authorities, and that there are no outstanding requisitions.
Photographs	All photographs in this report were taken by the Valuer on the date of inspection.

No Pecuniary Interest	The valuer has no pecuniary interest in the subject property either past, present or prospective at the date of preparing this report and the opinion expressed is free of any bias in this regard.
Not to be reproduced without permission	Neither the whole nor any part of this valuation or any reference thereto may be included in any published documents, circular or statement, nor published in part or full in any way, without written approval of the form and context in which it may appear.
Other Taxation Implications	Herron Todd White are not taxation experts and we provide our valuation assessment and any associated sales, rental or feasibility analysis, independent of any consideration of income tax, capital gains tax or any other property related tax implications that may be associated directly or indirectly with the subject property.
Prudent Lending	This valuation is prepared on the assumption that the lender as referred to in the valuation report (and no other) may rely on the valuation for mortgage finance purposes and the lender has complied with its own lending guidelines as well as prudent finance industry lending practices, and has considered all prudent aspects of credit risk for any potential borrower, including the borrower's ability to service and repay any mortgage loan. Further, the valuation is prepared on the assumption that any such lender is providing mortgage financing at a conservative and prudent loan to value ratio. This clause (Prudent Lenders Clause) only applies if the lender is not a lender regulated by the Banking Act 1959 (Cth).
Structural Survey	This valuation report does not purport to be a site or structural survey of the land or improvements thereon, and any advice provided is not given in the capacity as an expert.
Town Planning	We assume that planning data obtained from the relevant Local Planning Authority is accurate. In the event that a Town Planning search or any other relevant Planning document is obtained and the information therein is later found to be materially different to the town planning information detailed within the valuation, we reserve the right to amend the valuation.

Total	\$66,000
Estimated Insurance Value	\$65,000

MANAGING FARMS TO PROTECT WATERWAYS

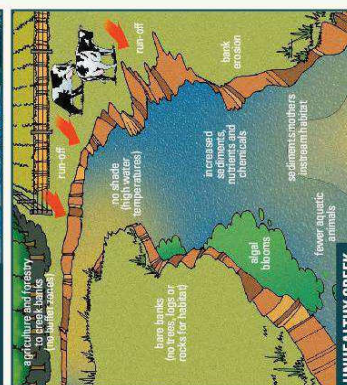

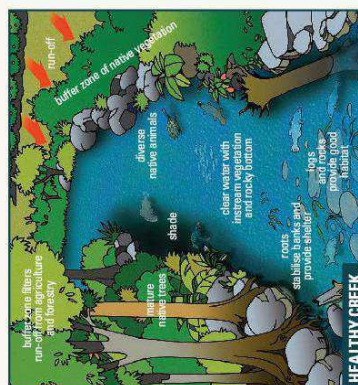

Managing macadamia farms to protect waterways is an integral part of good land management. It helps protect:

- the **health** of our waterways
- our local **drinking water supply**
- land and vegetation adjacent to waterways.

WHAT CAN LANDHOLDERS DO?

and managers can protect drinking water quality by:

- reducing **soil erosion**
- controlling **runoff**
- providing cover crops, **groundcovers** or mulch to maintain the orchard floor
- regenerating rainforest to provide a **buffer** for agricultural activities
- incorporating **Integrated Pest Management**

REGIONAL DRINKING WATER CATCHMENTS

A catchment is an area of land that feeds rainwater into a creek, river or other water body such as a dam. If that water is used for drinking, the catchment is known as a drinking water catchment.

Rous County Council has three main functions: bulk water supply; weed biosecurity; and flood mitigation. It is the regional water supply authority supplying drinking water in bulk to the local government areas of Lismore (excluding Nimbin), Ballina (excluding Wardell), Byron (excluding Mullumbimby), and Richmond Valley (excluding Casino).

This water is sourced from three key drinking water catchments including the catchments of Rocky Creek Dam, Emigrant Creek Dam and the Wilsons River Source as well as a number of groundwater sources.

Rous County Council manages these drinking water catchments to ensure the quality of drinking water for over 100,000 local people.

PROTECTING OUR WATERWAYS IS A SHARED RESPONSIBILITY

Protecting our drinking water catchment is a responsibility Rous County Council shares with industry, businesses, landholders, communities and individuals. Every control measure counts and contributes to the quality of drinking water supplies in the long term.

FURTHER INFORMATION

For information about managing your farm to protect water quality including fencing, protecting or restoring vegetation and financial assistance opportunities available contact Rous County Council, your Local Land Services or Landcare.

PROUS

MANAGE MACADAMIA FARMS

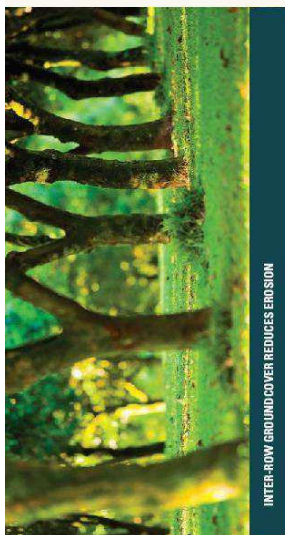

**to look after our drinking
water catchments**

"Eventually the water that runs off a drinking water catchment area will be consumed by people. The activities of local landholders directly influence our community's drinking water supply."

HEALTHY CATCHMENTS = QUALITY WATER

- Q** Do you manage property in a drinking water catchment?
- A** If so, you have a duty of care to protect water quality.
- Q** Do you want to manage your macadamia farm to protect drinking water?
- A** If so, financial assistance opportunities may be available.

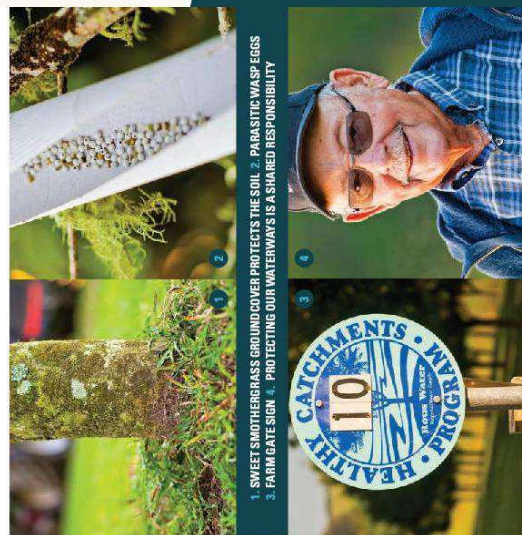

INTER-ROW GROUND COVER REDUCES EROSION

THE IMPACT OF MACADAMIA FARMS ON WATER QUALITY

Macadamia farming accounts for a high proportion of land-use in our drinking water catchments. Poor land management on macadamia farms can lead to excessive runoff, soil erosion, high use of pesticides, reduced water quality and damage to in-stream ecosystems.

This affects **river health** and **drinking water quality** by introducing:

- **nutrients** from pesticides, herbicides and fertilisers which cause an increase in the risk of blue-green algal blooms (some of which can be toxic); and
- **sediment** from soil erosion and runoff from farms which harms aquatic life, clogs streams and burdens the drinking water process.

1. SWEET SMOTHERGRASS GROUND COVER PROTECTS THE SOIL 2. PARASITIC WASP EGGS
3. FARM GATE SIGN 4. PROTECTING OUR WATERWAYS IS A SHARED RESPONSIBILITY

HOW CAN LANDHOLDERS MANAGE FARMS TO PROTECT WATERWAYS?

Reduce Soil Erosion

A basic set of principles applies to reducing soil degradation and achieving erosion control on macadamia farms. Landholders should:

- provide maximum soil surface protection via pasture or mulch
- minimise the length of time soil is left bare
- control runoff water from flowing over bare ground.

Control Runoff

Applying a range of strategies to reduce nutrient contamination of runoff water is an integral part of good land management. Macadamia producers should:

- maintain good ground cover around dams, watercourses and streams
- avoid fertilising areas that carry runoff water, are without groundcovers, or near watercourses
- apply fertiliser in smaller, more frequent amounts and avoid fertiliser application prior to or during periods of heavy rainfall
- check earthworks such as inter-row drains, mounded tree rows or diversion banks for necessary repairs and maintenance
- revegetate or mulch bare areas created by harvesting, vehicular traffic, erosion or other reasons.

Cover Crops, Groundcovers, or Mulch

Carefully selected cover crops, ground covers or mulch used for both inter-row and under tree areas in the macadamia orchard not only help reduce erosion but can also provide the landholder with:

- organic matter
- weed suppression
- increased water infiltration
- reduced fertiliser loss
- nitrogen fixation as well as improved micro-environment for establishing trees.

Integrated Pest Management

Following Integrated Pest Management (IPM) on macadamia farms reduces nutrients from pesticides, herbicides and fertilisers from leaching into our drinking water catchment. Using IPM on the farm can significantly reduce:

- chemical spraying for borers and bugs
- poisoning and trapping for rats
- costs associated with pest management.

Macadamia producers can reduce pest animals on farms by attracting bats and birds to the farm by:

- providing nesting boxes for barn owls and micro-bats
- planting rainforest species on the farm to encourage birds, beneficial insects and carpet snakes.

Riparian Vegetation

Protecting and restoring waterway fringes with vegetation creates a buffer zone between agricultural activity and the waterways flowing through our catchments.

In addition to increasing drinking water quality, protecting and regenerating waterway fringes on macadamia farms helps to:

- improve property values
- attract and support wildlife
- slow surface runoff and reduce erosion
- limit rats and other pests through the encouragement of beneficial insects, owls and snakes
- filter and trap chemicals and pesticides.
